

1. Instalando o Python:

Baixar no link <https://www.python.org/downloads/> a versão mais recente do python e instalar pela opção “Install Now”. Marcar a opção “Add Python x.xx to PATH”.

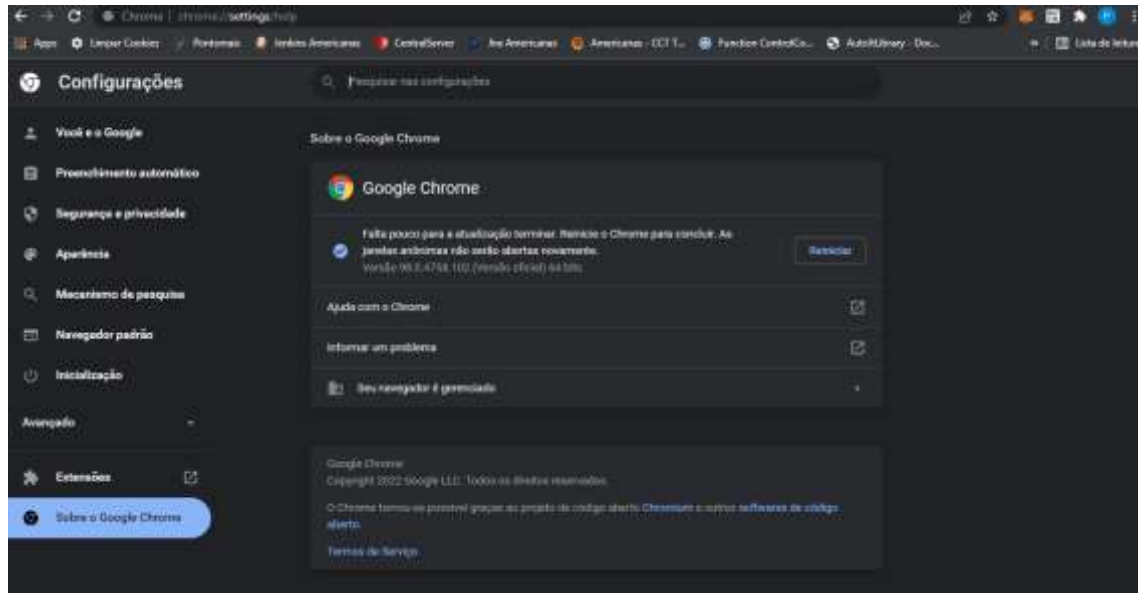

Quando concluir a instalação, podemos checkar se ficou tudo ok acessando o prompt de comandos (terminal) pelo menu iniciar e digitando “python -V”. Atenção ao V, que deve ser maiúsculo.

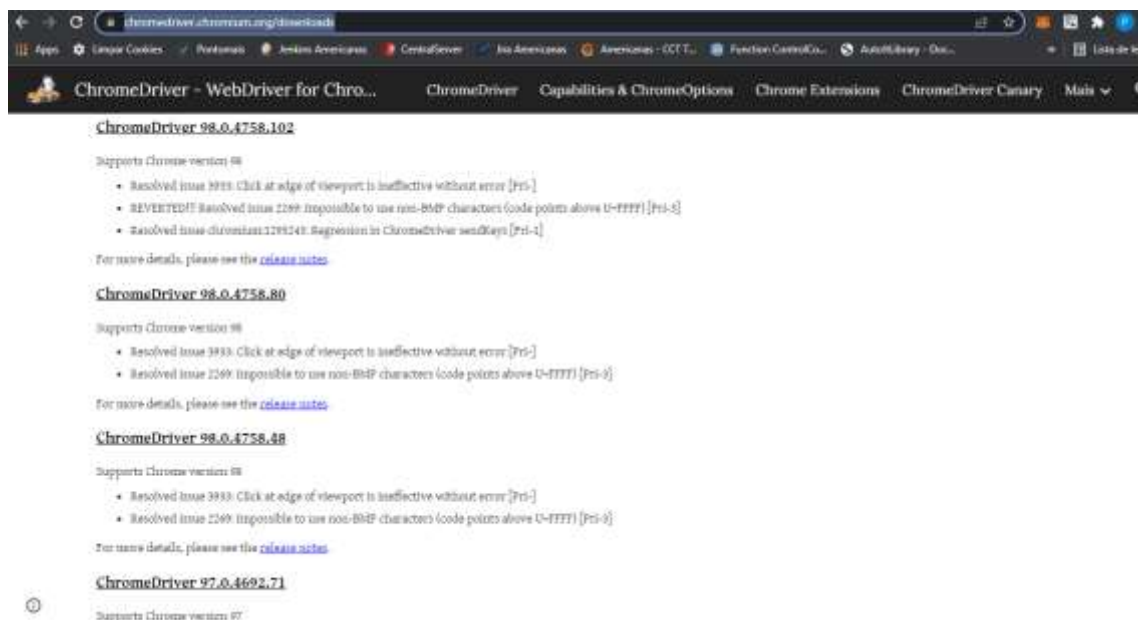

Se aparecer a versão do Python, a instalação foi concluída de maneira correta. Se não aparecer nos contate para pedir suporte.

2. Download do Chromedriver

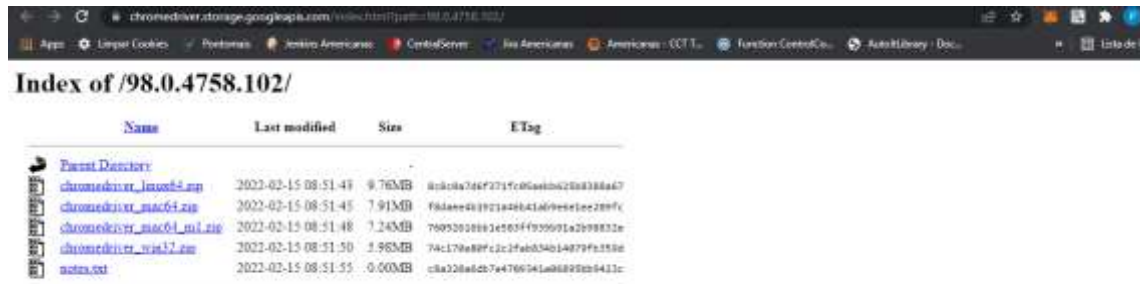

Ao acessar o menu de ajuda do Google Chrome pelo link “chrome://settings/help”, visualizamos a versão do navegador, no caso abaixo é a 98.x.xxx.x. Precisaremos da versão para saber qual Chromedriver baixar.

Com a versão em mãos, acessamos o link <https://chromedriver.chromium.org/downloads> e realizaremos o download da versão correspondente:

Após selecionarmos a versão, seremos direcionados para a tela de seleção de sistema operacional. No caso deste manual que se refere a Windows, vamos escolher “chromedriver_win32.zip”.

Após o download devemos extrair o executável, recortar e colar na pasta “C:\Windows\System32”:

Podemos também confirmar o sucesso deste setup digitando “chromedriver -v” no terminal, onde devemos visualizar a versão do chromedriver:

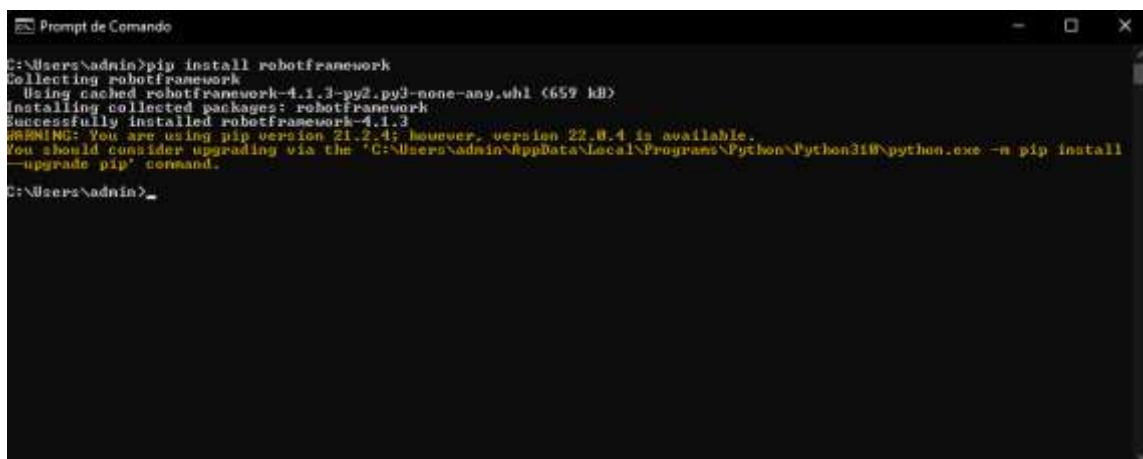

3. Instalação das Libraries Robot Framework e Selenium Web Driver:

3.1. No terminal digitaremos o comando “pip install robotframework”...

Ao pressionarmos ENTER, será instalada a biblioteca e o retorno será similar ao print abaixo:

3.2. No terminal digitaremos o comando “pip install robotframework-seleniumlibrary” e pressione ENTER para concluir a instalação.

```
Prompt de Comando

C:\Users\admin>pip install robotframework-seleniumlibrary
